Fix it Right the First Time!

unlike the competition our pins are threaded providing easy service in the future

shows pin screwed in bottom of hinge

(New bracket included in kit)

Puttin' the Screws to the Competition!

Regarding Hinge Pin & Bushing replacement on all 1999 & newer CK Series Trucks & 2000 and newer S.U.V's

98 patent# 7,863,253 E2

Our deluxe kit pins are designed to be screwed into the new bracket. This allows for future maintenance to the hinge and ease of replacing bushings.

Our bushings are from manufacturer commercial grade bronze, which is more porous than brass allowing them to retain lubricants.

To complete this repair properly without damaging the hinge bracket that remains welded to the vehicle, it is important not to pound out the pins like our competitors may tell you to do. Use our pin removal tool (PMMAC02) to ensure the bracket is not bent during the pin removal process.

WARNING: DO NOT POUND PINS OUT
use our factory pin removal tool to prevent damage to brackets from pounding.

Our Deluxe Kit bracket is available in many colors, and is designed to allow the pins to be threaded securely into place, allowing for future maintenance of components.

Our washers (same as the original equipment washers) removed, ensuring an exact fit.

The lock nuts included in our kits are stainless steel and not zinc.

View our online presentation!

BUY BACK PROGRAM: Return our competitors kits for full credit towards the purchase of our deluxe hinge kits. For more details, see our web site at: www.totalauto.com or contact a sales representative at: 800.450.7750
